EXPERIENCE

IBM Foundation (Certificate)

June 2025 – July 2025

AIML and Full Stack Developer Intern under the supervision on mentors from Edunet Foundation

- Worked on Artificial Intelligence, Machine Learning, and Web Development projects involving real-world problem solving
- Developed a full-stack Blood Bank Management System with inventory management, donor/recipient tracking, and CRUD operations

SmartBridge

June 2025 – July 2025

Salesforce Developer Intern

- Worked on Salesforce application development and workflow automation using Apex Programming
- Gained hands-on experience in CRM solutions, business logic implementation, and cloud platform customization

PROJECTS

RelaunchHer

Engineered a comprehensive career-reentry platform empowering women to return to the workforce through dynamic opportunity boards, community storytelling, and an actionable task planner. Developed a high-performance **Single Page Application (SPA)** leveraging **React, Vite, and Tailwind CSS** for a fluid, responsive user interface. Implemented a secure **dual-role authentication system** with stateful protected routing, and integrated a simulated backend via **JSON Server** to orchestrate asynchronous **RESTful CRUD operations** and dynamic data fetching

Hybrid-TCN Micro-Expression Detection System

Engineered a research-grade system for detecting brief (40–500ms) involuntary facial movements using a hybrid multi-modal pipeline combining Optical Flow and a novel **Chromo-Temporal vascular signal**. Developed a high-performance temporal architecture utilizing **Dilated TCNs** and **MobileNetV2**, optimized for edge inference on CPU at 20+ FPS with real-time emotion labeling. Achieved a state-of-the-art **0.99 F1-score** on the CASME II and CK+ datasets using **LOSO cross-validation**, outperforming existing LSTM-based baselines in precision and recall

Aether Writer

Engineered a production-grade AI writing assistant utilizing a **hybrid neural pipeline** (T5, BERT-Tiny) for offline grammar correction and linguistic analysis. Developed a modular 5-layer scanning engine combining **deterministic heuristics** and **deep learning** to detect structural and semantic errors with high precision. Built a high-performance **SPA** with **React, Vite, and Framer Motion**, featuring a low-latency **LRU caching engine** and glassmorphic UI

EDUCATION

SRM University AP

2023 – 2027

B.Tech in Computer Science with Specialization in AI&ML

CGPA: 9.08/10

Bhashyam Junior College

2021 – 2023

Intermediate MPC

Score: 933/1000

Bhashyam Blooms (E.M) U.P School, Guntur

2021

Class 10 CBSE

Score: 475/500

SKILLS AND ACHIEVEMENTS

Achievements: Hackathons | NSIT Science Olympiad Gold Medal (AIR 4)

Certifications: Oracle Certified Java Programmer IBM Internship Certificate MongoDB Certified Associate Developer

Programming Languages: C, C++, Python, Java, JavaScript, PHP

Web Technologies: HTML, CSS, React, Node.js, Express.js

Databases: MySQL, MongoDB

Core Competencies: Data Structures, Algorithms, CRUD Operations, RESTful APIs, Full-Stack Development

Technologies & Concepts: Machine Learning, NLP, Authentication Systems, API Development, Responsive UI

Tools & Operating Systems: Git, Docker, VS Code | Windows, Linux
